MEMORY FOAM
LAYERS

TENCEL®
FABRIC

1_ COVER IN TENCEL 3D

In natural plant fibres. Naturally hypoallergenic because it derives from cellulose which has antibacterial and antifungal properties. Eliminates excess humidity that forms when the body sweats, it is hypoallergenic and hydroscopic. The three-dimensionality of the fabric makes it highly breathable.

2_ INDEPENDENT SPRING SYSTEM

Made up of 400/800 independent pocketed springs, combined with a special perimeter profile in tempered steel that runs along the mattress for calibrated and long-lasting support. 7 areas of different load-bearing capacities to ensure comfort and support for any body weight. The 7 areas are obtained by using springs with different preload in each area (i.e. the springs are compressed according to the area to be covered). This gives stability and gradual transition from one area to another.

3_ TOP BOX MASSAGING LAYER

Consisting of water and soya based polyurethane foam, density of DN 50, combined with a breathable volumetric fabric to guarantee the passage of air.

4_ SIDE BOX

Encloses the springs and is made of high density (DN 50) polyurethane foam, to guarantee perfect balancing of the resting surface. Makes the mattress strong and load-bearing.

5_ PADDING

In breathable, hypoallergenic and high resistant fibre.

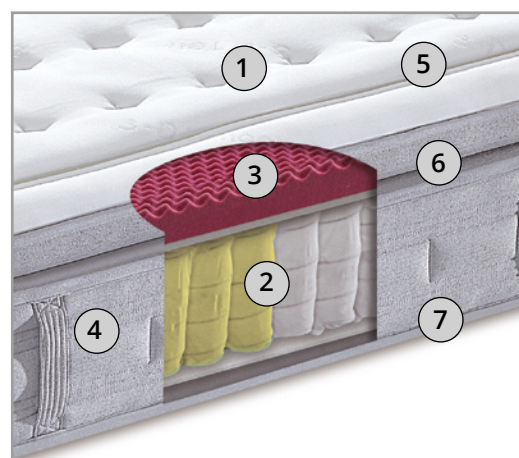

6_ SIDE 1: PILLOW TOP

With internal core integrated in memory (non-removable cover). Guarantees perfect distribution of the body weight, ensuring an anatomically correct position.

7_ NO FLIP MATTRESS: IT IS ONLY USED ON ONE SIDE

It is recommended to regularly rotate the mattress head to foot.
